Rainfall Frequency Estimation in England and Wales

Flood Estimation Handbook. Volume 1

Flood Risk Assessment and Management

Catchment descriptors

Flood Risk Management

Up to 5 million people in the UK are at risk from river and coastal flooding and it is a severe test to the countrys arrangements and flood defence infrastructure. Significant river floods in the UK over the years have prompted changes in flood defence legislation, and encouraged a substantial programme of building flood defences, but the risks still remain significant. This book follows on from the successful ICE Learning to Live with Rivers report in presenting the complete and extensive findings from the ICE Presidential Commission.

Rainfall frequency estimation

Flood Estimation Handbook

Flood Estimation Handbook

A study of water supply technology for students and practising engineers. This updated fifth edition covers important topics such as demand management, risk management and environmental impact assessment. European, UK and US standards, reputations and practice are covered throughout.

Statistical procedures for flood frequency estimation

Improving the FEH Statistical Procedures for Flood Frequency Estimation

This report recommends changes to the procedures contained in the 'Flood Estimation Handbook' which have been adopted as standard practice by the principal bodies engaged in flood frequency estimation in the UK and, in particular, by the Environment Agency.

Flood Estimation Handbook

Restatement and application of the flood studies report rainfall-runoff method

Overview

Statistical procedures for flood frequency estimation

Flood Estimation handbook guidelines

The Flood Estimation Handbook statistical procedures

This important book attempts to make the link between urban and rural hydrology. Essentially the same hydrological processes of attenuation, evaporation, infiltration and other losses occur in both urban and rural areas. Rural and Urban Hydrology provides a description of the various techniques in the Flood Estimation Handbook, which has now superseded the Flood Studies Report as the standard method of estimating flood discharges in UK rivers. Described in detail is the method of estimating low flows recommended for the United Kingdom.
