Clover's Child

From the million-copy bestseller Amanda Prowse, the queen of heartbreak fiction. Amanda Prowse is the author of *The Coordinates Of Loss* and the no.1 bestsellers *Perfect Daughter*, *My Husband's Wife* and *What Have I Done?* When eighteen-year-old Dot meets Sol, she feels that love has arrived at last. Solomon Arbuthnott is a man who can bring colour and warmth to her drab life in sixties London - and what's more, he is a young, handsome soldier with excellent prospects. Someone who wants to give her everything she has dreamed of. Someone who can promise her blue skies, laughter, sun and always, always love. And for a while, life is truly like a song. They stroll hand-in-hand by the Serpentine, dance cheek-to-cheek in Soho's smoky bars, and begin to plan their idyllic future, growing old together in Sol's ancestral home on the island of St Lucia. But this is 1961. East End girls don't date West Indian boys, let alone fall in love with them and leave the country. They stay at home and live the life their parents planned for them. Even if it leaves them lonelier than they ever thought possible. Even if it rips their heart in two

Reviews for Amanda Prowse:

The book "Guitar Shapes Navigator" deals with the determination of the positions of characteristic points, lines, distances and shapes of parts of the guitar as a whole. In contrast to technical drawings, "Guitar Shapes Navigator" does not use classic dimensions, but mainly the coordinates of the positions of the end points, center points, etc. Everything takes place in the X and Y coordinates of the normal Cartesian system. The third dimension, the Z coordinate, is used as needed. And the main role is played by the origin, the Z E R O P O I N T - actually invisible under the bridge.

There is a growing awareness of the significance of constructions in grammar in the world's languages. To date there has not been a single volume that addresses the issues of constructions within a functional Role and Reference Grammar (RRG) account. The book is a collection of articles that will serve the scholarly community as a reference work on the role, place and significance of constructions within this functional model of grammar. As a result, this volume represents the first instance of cross-linguistic comparison of these important discourse and syntax-related phenomena. The articles cover a variety of typologically different languages including German, Irish, Spanish, French, Japanese, Yaqui, Tepehua (Totonacan), Persian, and English, and they offer new data on the role of constructions, within the RRG theory, in these languages. Further, this volume contributes towards providing a comprehensive overview of grammatical constructions which are central to our understanding of how human languages function, in a functional linguistics perspective. This scholarly work is grounded in a functionally oriented model that makes strong claims of descriptive and typological adequacy. The book will represent a valuable step forward in linguistics research as it applies the RRG theoretical framework to the analyses of constructions.

An old genre is given a new look, as portraits and self-portraits of Marcel Duchamp invent and cover up as much as they reveal and portray. One of the most influential artists of the twentieth century, Marcel Duchamp (1887-1968) was a master of self-invention who carefully regulated the image he projected through self-portraiture and through his collaboration with those who portrayed him. During his long career, Duchamp recast accepted modes for assembling and describing identity, indelibly altering the terrain of portraiture. This groundbreaking book (which accompanies a major exhibition at the Smithsonian Institution's National Portrait Gallery) demonstrates the ways in which Duchamp willfully manipulated the techniques of portraiture both to secure his reputation as an iconoclast and to establish himself as a major figure in the art

world. Although scholars have explored Duchamp's use of aliases, little attention has been paid to how this work played into, and against, existing portrait conventions. Nor has any study yet compared these explicitly self-constructed projects with the large body of portraits of Duchamp by others. Inventing Marcel Duchamp showcases approximately one hundred never-before-assembled portraits and self-portraits of Duchamp. The (broadly defined) self-portraits and self-representations include the famous autobiographical suitcase *Boîte-en-Valise* and *Self-Portrait in Profile*, a torn silhouette that became very influential for future generations of artists. The portraits by other artists include works by Duchamp's contemporaries Man Ray, Alfred Stieglitz, Francis Picabia, Beatrice Wood, and Florine Stettheimer as well as portraits by more recent generations of artists, including Andy Warhol, Jasper Johns, Sturtevant, Yasumasa Morimura, David Hammons, and Douglas Gordon. Since the mid-twentieth century, as abstraction assumed a position of dominance in fine art, portraiture has been often derided as an art form; the images and essays in *Inventing Marcel Duchamp* counter this, and invite us to rethink the role of portraiture in modern and contemporary art.
