Paradigm - Wikipedia Artificial intelligence - Wikipedia GitHub - norvig/paip-lisp: Lisp code for the textbook AI with Python & Logic Programming - Tutorialspoint

Paradigm - Wikipedia Artificial intelligence (AI) is intelligence demonstrated by machines, as opposed to natural intelligence displayed by animals including humans. Leading AI textbooks define the field as the study of "intelligent agents": any system that perceives its environment and takes actions that maximize its chance of achieving its goals. Some popular accounts use the term "artificial

Artificial intelligence - Wikipedia This is an open-source repository for the book Paradigms of Artificial Intelligence Programming: Case Studies in Common Lisp by Peter Norvig (1992), and the code contained therein. The copyright has reverted to the author, who has shared it here under MIT license.

GitHub - norvig/paip-lisp: Lisp code for the textbook Paradigm comes from Greek παράδειγμα (paradeigma), "pattern, example, sample" from the verb παρδείκνυμι (paradeiknumi), "exhibit, represent, expose" and that from παρά (para), "beside, beyond" and δείκνυμι (deiknumi), "to show, to point out".. In rhetoric, the purpose of paradeigma is to provide an audience with an illustration of similar occurrences.

AI with Python & Logic Programming - Tutorialspoint Logic Programming is a programming paradigm in

which the problems are expressed as facts and rules by program statements but within a system of formal logic. Just like other programming paradigms like object oriented, functional, declarative, and procedural, etc., it is also a particular way to approach programming.
